Who We Are / And What We Do.....

V&H Material Handling LLC is the Authorized Kardex Remstar Distributor throughout Pennsylvania and New York. We help reduce your missions operating costs by implementing material handling solutions that will efficiently and effectively manage your organization's resources (productivity, floor space, inventory and information). Complimentary site analysis will guide you to the correct solution while factory certified technicians will install and maintain your equipment 24/7. We utilize high density storage systems which provide several sustainable benefits to an operation including:

- Optimizing your facility's floor space and vertical space.
- Organizing inventory and information to boost productivity and eliminate clutter.
- Improving employee accuracy and reducing errors.
- Enhancing workflow productivity and removing bottlenecks that waste time.
- Establishing systematic information systems to comply with regulations.
- Enhancing security to reduce pilferage and keep inventory in a cleaner environment.
- Providing ergonomic solutions to enhance productivity and reduce injuries.

Replacing standard shelving and drawer systems with automated storage and retrieval systems from Kardex Remstar can save up to 85% floor space. The key to success is expanding value added activities into the recovered floor space. All Kardex Remstar solutions deliver stored goods directly to the operator, eliminating time spent walking and searching for stored goods. This leaves more time for productive picking. Saving space and increasing productivity.

Kardex Remstar Storage And Picking Solutions Are Used Throughout Military Bases And Administration Offices

Lektriever Model 115, 120 & 125

At Kardex Remstar, we've made a science out of storage and retrieval, offering intelligent office solutions to improve your business processes. Working closely alongside you, we can identify the benefits of tailored storage solutions, devising innovative strategies and offering practical advice to help drive your organization forward to its corporate goals. Paper records, files, stationery, CD/DVD, credit cards, library, and X-ray; light industrial applications, sample vials, artifacts, valuables collectors' items, guns, sports equipment, check books, certificates and licenses... we understand that companies have to contend with an ever-widening range of media.

That's why we've developed solutions to suit any of these applications, which will save space, improve security and productivity, comply with the latest legislation, deliver a greener office environment and save you money. So, whether you are relocating, refurbishing – or simply looking to do things better – you can rely on Kardex Remstar for fresh, 'out-of-the-box' thinking to solve an age old problem.

The compact design of the new Kardex Remstar Megamat RS Vertical Carousel ensures maximum storage density using minimal floor space.

Shelves or drawers rotate up or down via the shortest path, automatically delivering stored items to an operator at an ergonomically positioned pick window. Each unit is compatible with an entire suite of software and controls or can be used as a standalone solution.

Reliability: Megamat Vertical Carousels have a higher MTBF (Mean Time Between Failure Rate) than most household appliances. An emergency hand crank makes inventory available 24-7 regardless of available power.

Megamat RS350

Element VLM

The Element Vertical Lift Module is a basic combination of vertically arranged storage trays that are delivered using an extractor platform to the operator at an ergonomic access opening. It is the latest addition to a long line of existing Kardex Remstar Vertical Lift Modules.

Designed with simplicity and quality at its core, the Element Vertical Lift Module is the perfect solution for stepping out of shelving and into dynamic storage solutions. Save Up To 80% Floor Space. Get more storage capacity in a smaller footprint with the Element Vertical Lift Module. When compared to shelving, the Element Vertical Lift Module provides the same storage capacity in up to 80% less floor space, allowing facilities to expand internally without building construction or relocation. With a basic design, the Element Vertical Lift Module is priced as an affordable entry level Vertical Lift Module.

The Kardex Remstar Shuttle® Vertical Lift Module (VLM) has been designed to meet a broad range of storage and retrieval applications in manufacturing, distribution, retail and warehouse operations. The combination of storage density, flexibility, efficiently and security makes it an ideal storage solution for most every application!

The Kardex Remstar Shuttle XP Vertical Lift Module is an enclosed system of vertically arranged trays stored on both sides of the unit with an extractor device placed in the center. The VLM automatically delivers trays with the stored items to the access window with a push of a button or a scan of a barcode. The device is modular in construction allowing the height and number of access windows to be adjusted pre and post construction. Depending on the usable building interior heights, up to 85% of a conventional storage systems occupied floor space may be recovered. Using CubeStar technology the Shuttle VLM automatically scans the height of the product on each tray and finds ideal storage location within the unit. Trays are stored in one inch (25 mm) increments using the least amount of space and maximizing the storage density within the unit.
